Fridays' Swyx Tip #46: Feature Code Intercom

Entry posted by Tom Wellige August 28, 2020
684 views

From 2009 to 2011 [mirjam baumberger](#) wrote a great blog, the "**Fridays' Swyx Tip**". Every Friday she posted a tip regarding the usage of SwyxWare and connected tools and devices. As the old forum is [offline](#), this article series will be restored here again over the time. Please note that some information in this article series might not be valid anymore with current SwyxWare versions.

This blog article was originally posted on 25.02.2011 04:28

Dear Swyx Users

Did you know that you can Intercom to a colleague's phone directly?

This way you can pass on a message to your co-worker and he does not have to pickup the phones handset. This means a call will be immediately established.

In the case of Swyx Phone the telephone speaker is activated and in the case of SwyxIt! the PC speakers are activated and the caller can immediately give his message.

Option: A

One can setup a SwyxIt! Speed-Dial and define in the Properties whether the Speed Dial can be used for an intercom connection.

Option: B

When dialing a users extension simply add the feature code ***72***:
EXTENSION*72*

Note: A user can only call another user per intercom connection if he or she is signaled the status of the other user.

Have a good weekend and happy Swyxing...

Regards

Mirjam
